

Alliant Energy's

Beaver Dam Solar Project

March 2024 update

The 50-megawatt Beaver Dam Solar Project in Dodge County, Wisconsin, is part of Alliant Energy's **Clean Energy Blueprint**, a strategic roadmap to cost-effectively accelerate our transition to renewable energy and reduce carbon emissions. Now complete, the project positively impacts the environment and generates enough energy to power around 13,000 homes.

Construction update

The Beaver Dam Solar Project passed the testing and commissioning phases to show it can provide the safe and reliable energy our customers expect.

We're pleased to share we placed the Beaver Dam Solar Project into operation! The project's approximately 120,000 solar panels are operating as intended and will provide clean energy for the next 30 years.

We continue to advance our Clean Energy Blueprint to develop low-cost, renewable energy for our customers.

In December, we more than tripled our solar energy generation capacity in Wisconsin. We expect to add an additional 200 MW of solar capacity to our portfolio this year.

Learn more about these projects and other plans at alliantenergy.com/cleanenergyblueprint.

Thank you for your support of the Beaver Dam Solar Project!

Sign up for community solar

Are you interested in reducing your utility bills for the next 20 years? The Alliant Energy® Community Solar program lets customers buy blocks of a solar garden and receive credits for the energy generated for the next two decades.

This spring, we will start construction on our Janesville Community Solar Garden. The project will be comprised of 9,000 solar blocks for purchase at \$337 each. A typical Wisconsin electric customer would need approximately 18 solar blocks to offset 100% of their average annual usage.

Wisconsin electric customers who purchase blocks can begin to receive credits once the project is operational, which we expect will be later this year. We anticipate customers will recoup upfront costs after about 10 years.

For additional information, visit alliantenergy.com/janesvillecommunitysolar.

Benefits to the community

With the Beaver Dam Solar Project complete, the town of Beaver Dam, town of Burnett and Dodge County will begin to receive shared revenue payments totaling more than \$200,000 annually for the life of the project.

The state-administered Shared Revenue Fund will contribute these payments to the community's annual operating income. Local officials can use the funds as they deem appropriate.

For additional information, visit alliantenergy.com/sharedrevenue.
